

# Installing Graphviz

## Option #1: Anaconda Navigator (Recommended)

Open up Anaconda Navigator and then click on “Environments.” Filter the packages to “Not Installed” and type **graphviz** into the search bar. Check the box next to the library, and then click “Apply” at the bottom of the window.

## Option #2: Command Line

If the above doesn't work, then you can install the library directly from the command line. Open up the **Terminal (Mac)** application or **Command Prompt (Windows)** program and then run the command:

```
conda install graphviz
```

And press **y** (for yes) on your keyboard. Afterwards, run:

```
conda install python-graphviz
```

And press **y** (for yes) on your keyboard.
